

Winter Driving Hazards CD ROM

Who Should Use this CD-ROM Training?

All:

- Employees who drive as a part of their job
- Volunteers who drive as part of their duties
- New Drivers
- Those who have not taken driver training recently

Driving on our road and highways is a privilege, not a right. We have a responsibility to control the power of the vehicle that technology puts in our hands. This CD ROM was developed to fill the need for driver's education and training in winter conditions. Information is presented in 4 modules

Winter Driving will introduce you to the limits of performance in winter.

You will also look at winter driving concerns, tires, traction and how to prepare you and your vehicle for winter.

Braking and Steering explores various techniques for braking, steering as well as for avoiding collisions and obstacles. We also learn about different braking systems including conventional and automatic braking systems (ABS).

Skid Control looks at the causes of skidding, how to recover from a skid, and how to prevent a skid from happening. You will also learn about the importance of visual tracking, and will look at situational management in the form of a series of problem and their solutions.

At the Scene of a Collision gives you the chance to be first on the scene of a collision and learn how to cope with the trauma as the situation unfolds. We look at what and what not to do at the scene of the collision as well as what to do if your vehicle is in an accident.

Brain teasers and the end of each module and a short quiz at the end of the program are provided to test your knowledge.
